

Multi-Pitch FilterVent®

Top performance. No matter how you look at it.

Multi-Pitch FilterVent ridge vent installs on the peak of the roof allowing exhaust ventilation all along the roofline -- end-to-end.

Versatile and flexible one-piece aluminum design enables Multi-Pitch FilterVent to fit roofs with 3/12 to 12/12 pitches. This ridge vent combines advanced design with simple, secure installation to provide outstanding performance.

Multi-Pitch FilterVent is a molded aluminum ridge vent that is available in a variety of colors and bronze and zinc. The vent is installed across the entire ridge of the roof, creating a smooth line capping off the ridge.

Features:

- **Exceptional airflow.** An external baffle creates low pressure over the vent openings to "pull" air from the attic. Multi-Pitch FilterVent provides 18 square inches of net free area per linear foot.
- **Advanced weather protection.** The external baffle deflects wind and weather over the vent to help protect the attic from rain and snow infiltration.
- **Internal weather filter.** Provides a more complete barrier to help protect the attic from wind-driven rain, snow, dust and insects.
- **Easy Installation.** The vent is versatile and flexible fitting roof pitches from 3/12 to 12/12. One-piece design with baffle and filter so that there is no job-site assembly required.
- **Accessories.** A solid rubber end plug helps prevent weather infiltration. Connector plugs and straps ensure pieces fit tightly together.
- **Peace of Mind.** [30-year limited warranty](#) and 5-year Replacement Plus™ Protection.
- **Available in zinc and copper.** Multi-Pitch FilterVent is available in both zinc and copper. Zinc helps prevent the growth of fungus, molds and mildew. Copper adds a distinctive look to the roof peak.

Models

Multi-Pitch FilterVent FV101

This aluminum ridge vent comes in 10 foot lengths. Also available in venting packs.
